LAW OFFICE OF RICHARD J. HUGHES

Richard J. Hughes, WSBA #22897  
Attorney for "Thendic"

29 NOTE FOR MOTION TO MODIFY  
ORDER GRANTING SPECIFIC  
PERFORMANCE

LAW OFFICE OF RICHARD J. HUGHES  
1424 FOURTH AVENUE, SUITE 909  
SEATTLE, WA 98101  
PH. (206) 903-0664 FAX (206) 903-6144

It is now November 2000, eleven months after we took over the helm of Amiga. We have made some changes to the original plan, and continue to do our best in carrying the vision forward.

In the next two weeks, the next new product from Amiga will begin shipping - Amiga OS 3.9! This build has been designed specifically for one group - You, the Amiga family. We have been working very closely with Haage and Partner in creating a great new product offering for Amiga that you will all be very proud of.

Will there be a 4.0? This really depends on the sales of OS 3.9. You see, we did not have any plans for another version of the Classic OS. But we continued to receive requests, and because we listen to community, we decided to move ahead with Haage and Partner on this project. If OS 3.9 sells well, and we see a continuing need to produce for the existing Classic Amiga platform, then there is a strong possibility of a 4.0.

It is in your hands.

No matter what happens, AmigaDE is still moving ahead quickly and we look forward to delivering another version of the Amiga Software Development Kit (SDK) with new features and enhancements. In the coming weeks, we will be adding 3D and sound to AmigaDE.

There are many more exciting things happening at Amiga and I look forward to sharing with you all of the great details, and announcements in Koln, Germany in December. I look forward to meeting all of you there, at the Amiga World tradeshow. Bring a friend!

Looking forward to a great visit in Koln, and a wonderful holiday season,

Bill McEwen and the rest of the Amiga team.

---

From: Fleecy Moss <fleecy@amiga.com>  
To: John Burgess <j.burgess@telstra.com.au>  
Subject: Long Term Amiga Ball Game?

hey there ;)

A team here in Britain is already laying the foundations to the AG3 feature set which has already recieved wide spread support from our B2B partners and suppliers.

Amiga Inc is moving full steam ahead, despite recent adversities, AOS4 is close to completion and we are moving forward with a new implementation of the Amiga Digital Content Engine. The legacy Amiga Digital Enviroment (AmigaDE) will be avabile only to the Bplan Pegasos demographic (as well as PocketPC Devices) and will constitute the first phase of Amiga Digital Living Tangent Development. A wide variety of content driven products will contain different implementation subsets of Tao's Intent , targeted at the unique usability matrix of each target demographic.

While Amiga inc has faced great adversity this year, from competing operating systems that seek to steal the consistant effort we have poured into the Amiga operating system since the gateway days, 2004 looks to be an exciting year for the amiga community with the impending rollout of AmigaOS4 and shortly after the integration of the AG2 feature set into the OS. 2005 will see a whole new operating system based on AG3 released in pararel to AOS4.5/AG2.

hope this helps ;)

Fleecy Moss  
CTO Amiga Inc

### **AmigaOS 4**

AmigaOS4 represents Amiga taking control of the AmigaOS and reinvigorating it as it drives it forwards as an integral part of the Amiga Digital Environment.

The purpose of the AmigaOS4 family of releases is to;

1. move the 68K OS3.9 to a native PPC OS, enhancing and where necessary reimplementing the OS to take advantage of the PPC CPU
2. add new functionality to improve the functionality and performance of AmigaOS
3. allow for full backwards compatability via the Eyetech AmigaOne (with a classic Amiga attached) or retargetable application compatability via any AmigaOne
4. move the community to new, state of the art hardware
5. provide an attractive computing environment to non Amigans so as to encourage growth of the Amiga community
6. integrate the AmigaDE into the AmigaOS
7. provide a foundation for the development of AmigaOS5

### AmigaOS 4.2

AmigaOS4.2 will build upon the foundation of AmigaOS4. It is designed to ;

- Integrate the Amiga Digital Environment (AmigaDE) into the AmigaOS
- make OS4 fully device retargetable, allowing all applications to be able to operate without the need for physically attached older Amiga hardware
- Open up access to the new hardware features offered by the zico hardware specification
- Convert, reimplement and enhance more of the AmigaOS4.0 68k code to PPC

The feature set for AmigaOS4.2 includes;

- AmigaDE integration
  - AmigaDE hosted directly in the AmigaOS
  - Full access to all content experience and development
  - Personal Java

**Promotion Clarifications and Update**

**>> auf Deutsch <<**

**Bill McEwen - July 1, 2002**

**This promotion is about bringing the Amiga family back together again, reforming the ranks if you will, and preparing us all for the great successes we can create together, as we make the necessary moves towards the merging of the DE and OS technologies in AmigaOS 5.0 and beyond.**
